

Pre retrieval care bundle for Sepsis

- Perform Blood Cultures - prior to antimicrobials
- Administer Antimicrobials within 1 hour of admission
Cefotaxime +/- other specifically indicated agent
- Treat Hypotension with fluids and inotropes
20ml.kg fluid bolus's as required of crystalloid.
After 60ml.kg consider ETT and IPPV.
After 60-80ml.kg consider need for blood and blood products.
After 60ml.kg discuss inotropes with PICU
Aim for physiological resuscitation targets of MAP, CRT, urine output.
- Secure airway
 - OG/NG tube,
 - X-ray check of ET tube,
 - end-tidal CO2 monitoring
- Protective Ventilation Strategy
Tidal volume 6-8ml.Kg
PEEP 5 to 15 cm H2O
FiO2 to achieve SaO2 >94% along with best PEEP
- Measure Lactate
Check for Hypocalcaemia and hypoglycaemia
