

This IV monograph is intended for use in Paediatric intensive care and may not be suitable for patients in other clinical areas

Noradrenaline

Drug	Dilution	Dose range	Rate calculations
Noradrenaline	0.3mg/Kg made up to 50ml in Glucose 5% (Can be made up in 0.9% sodium chloride but watch for discolouration. If this occurs discard syringe)	0.01 – 1 microgram/Kg/minute (Higher doses than above may only be prescribed if authorised by a consultant)	For a 0.3mg/Kg in 50ml syringe: 1ml/hour = 0.1 microgram/Kg/min 10ml/hour = 1 microgram/Kg/min

Common compatibilities

Noradrenaline should **only** be infused through a line with other inotropes.
